

Hookah system for EAZYDIVE

The low-pressure **EAZYDIVE** scuba diving system can be used in 3 ways :

1. In scuba diving : it is recharged by the compressor before the dive with an autonomy of about 5 minutes.
2. In hookah diving : it is permanently supplied by the compressor through a 20 meters long air hose. It extends the dive time up to 60 minutes. You can choose to have the hose that flows either into the cylinder or directly into the regulator.

2.1 Hookah with air tank :

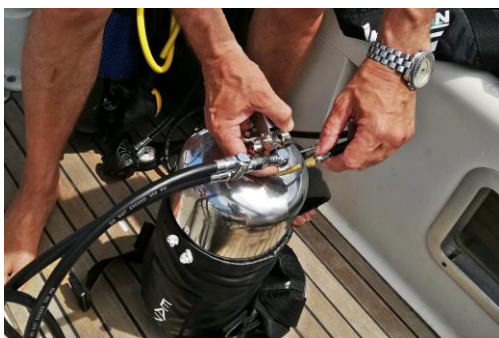

Connecting the quick coupling
on the compressor

Fixing the hookah hose on a die so that
the hose cannot pull on the compressor

Screwing in the pipe connector
on the valve tip of the tank

Closing the bag

Fixing the snap hook on the bag handle, so that the hose does not pull on the valve,
if it were to be in tension during the dive

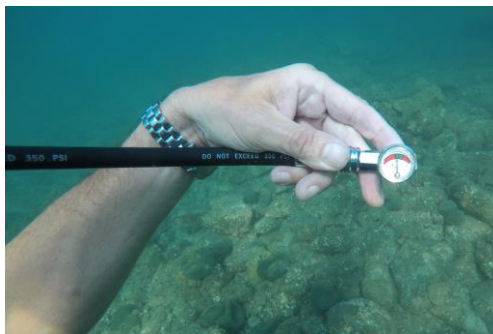

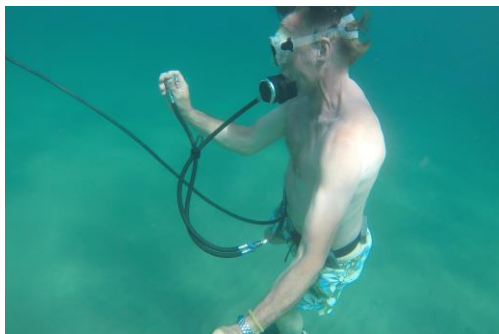

Ready for diving

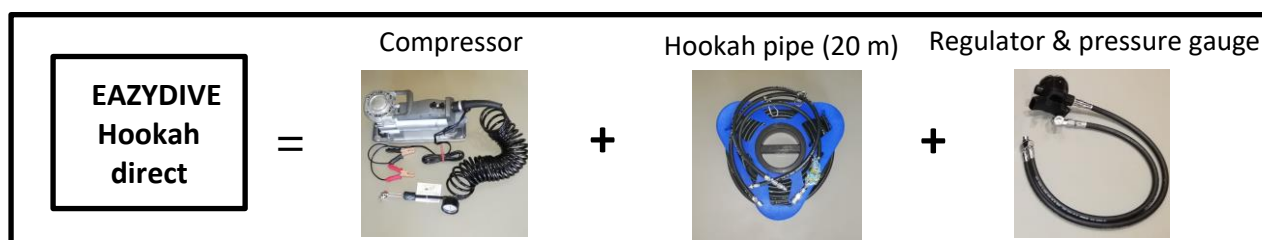

While diving with the **EAZYDIVE** tank

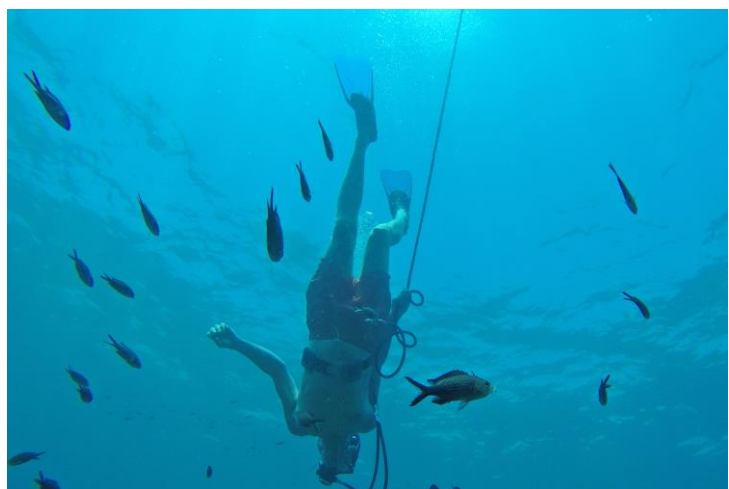

The system includes a remote pressure gauge to monitor the cylinder pressure

2.2 Hookah direct (without the air tank) :

Unscrew the regulator and facial pressure gauge assembly from the cylinder valve and screw it onto the hookah pipe. The pressure gauge indicates the pressure in the hookah's pipe.
At shallow depths, you can connect a second regulator to the hookah pipe and dive with two people.

Note : If the battery is properly charged, it will be able to provide ample power to the compressor during the 60 minutes of diving. It is therefore not necessary to start the engine.

MAINTENANCE :

The hookah does not require any special maintenance. To ensure a long life, if possible, rinse it with fresh water after each immersion in sea water.

PRECAUTIONS FOR USE :

Even in a limited practice, scuba diving requires basic training, medical aptitude and good physical condition. For your first dives, never dive alone, but with a competent person.

It is not recommended :

- To make children under 12 years old to dive and even older than 12 if they are not already good swimmers.
- To dive deeper than 10 meters.

L'Aquaphile SARL exonerates itself from any responsibility in the use that is made of EAZYDIVE.
